ABSTRACTS OF MYCOLOGY T.M.

ABSTRACTS OF MYCOLOGY is a compilation of mycological abstracts and reference citations to fungi and lichen papers derived from BIOLOGICAL ABSTRACTS and BIORESEARCH INDEX. Four indexes are included: Author, Biosystematic (taxonomic categories), CROSS (major subject concepts) and the Subject Index (permuted, keyword supplemented titles).

Each monthly issue contains abstracts from two consecutive issues of BIOLOGICAL ABSTRACTS and reference citations from one issue of BIORESEARCH INDEX. Reference numbers with the prefix 55 or 56 refer to the "Abstracts" section where the abstracts are arranged in progressive (but not consecutive) numerical order. The prefix 73 refers to citations in the "Bibliography" section, where the numerical arrangement is also progressive.

Instructions for usage precede each index. For more detailed instructions see BIOSIS' "Guide to the Indexes"* which contains a complete description of each index, or the more comprehensive instructions which preface the indexes in BIOLOGICAL ABSTRACTS and BIORESEARCH INDEX.

EXPLANATIONS OF ABBREVIATIONS USED IN BIOSYSTEMATIC INDEX

A mnemonic-type abbreviated term appears in the third column of the Biosystematic Index adjacent to each taxonomic entry. The abbreviation represents the subject heading under which the abstract or reference citation is assigned in BIOLOGICAL ABSTRACTS or BIORESEARCH INDEX and therefore indicates the type of study with which a particular taxonomic entry is concerned. Space-character requirements of the machine retrieval system used to compose and print the index make these abbreviations necessary. A complete listing of the abbreviated section headings is included for reference throughout the year. This listing will be revised and expanded when necessary and republished with each new volume.

BIOSYSTEMATIC INDEX

The Biosystematic Index is composed of lists of taxonomic categories which are coordinated with specific subject headings and abstract or reference citation numbers. Every organism(s) studied in a paper is indexed to a specific taxonomic category. Where there is a recognized disagreement over taxonomic classification, the organism is indexed under both taxonomic categories in question (e.g., the organism *Physarum* is indexed under both FUNGI-MYXOPHYTA and PROTOZOA-SARCODINA). The abbreviated notation printed left of the reference number represents the subject heading most indicative of the concepts in the paper. (See "Explanations of Abbreviations Used in Biosystematic Index" which precedes this index.) An asterisk (*) to the right of the reference number denotes one or more new taxa in the paper.

INSTRUCTIONS FOR USE:

If the reader is interested in studies on Myxophyta, the simplest method is to search Biosystematic Index for entries under FUNGI-MYXOPHYTA. The user should note the reference number and refer back to the actual abstract or reference citation.

Example:
Sample heading as it appears in The Biosystematic Index:

Alternately, if the researcher is interested in a MYXOPHYTA used within specific types of studies, e.g., *morphology,* he should scan the "Abbreviations Used in Biosystematic Index" (which precedes the Biosystematic Index) for the abbreviations of subject headings which represent his interest, i.e., PL MORPH for Plant Morphology.

For additional instructions see the "Guide to the Indexes" or the instructions preceding the Biosystematic Index to BIOLOGICAL ABSTRACTS or BIORESEARCH INDEX.

THE CROSS INDEX

The CROSS (Computer Rearrangement of Subject Specialties) Index includes more than 600 biological and biomedical subject headings. The major concepts of each research article may relate to one or more of these headings. All of the abstract and reference citation numbers are arranged under each major subject heading to which they relate. Therefore, if a given abstract or reference number relates to several subjects, it will appear under as many headings or subheadings as are necessary to index that abstract or reference thoroughly.

For convenience in searches, the major subject headings and respective subheadings are alphabetized with the reference numbers arranged in six vertical columns beneath them. The prefix numbers 55 or 56 refer to the "Abstracts" sections and 73 refers to the "Bibliography" section.

Example: Sample heading as it appears in CROSS Index:

References located under a given CROSS heading may be compared with those under one or more other headings. The selection of identical reference numbers appearing under more than one subject heading would result in the retrieval of references to documents dealing with the several concepts represented by those headings.

For additional instructions on the use of CROSS Index, see the "Guide to the Indexes" or the instructions preceding the CROSS Index in BIOLOGICAL ABSTRACTS or BIORESEARCH INDEX.

THE SUBJECT INDEX

The Subject Index consists of permuted, keyword supplemented titles, i.e., significant words from the author's title plus supplemental pertinent keywords added by editorial subject specialists.

Modifying words appear on each side of the alphabetically indexed keyword and each listing is keyed to a corresponding reference number. Reference numbers with the prefix 55 or 56 refer to the "Abstracts" section and those with the prefix 73 refer to the "Bibliography" section.

Example:

SOIL-FUNGI/INHIBITION OF MYCELIAL GROWTH OF PYTHIUM-GRAMINICO 55-11544

modifying phrase — *alphabetical keyword/ index term* — *modifying phrase* — *designates abstracts section* — *reference no.*

The keyword additions generally pertain to the organism (common and/or Latin name), drugs and their affiliations, specific types of chemicals (e.g., pesticides, carcinogens, teratogens, etc.) and their affiliations, instrumentation, methodology, geographic location and other supplementary index terms where applicable.

Certain lengthy keywords, including chemicals and chemical and drug affiliations which frequently appear in the titles, are abbreviated. Drugs are classified by their pharmacological effects and affiliated in abbreviated form according to the categories listed in the 17th edition of the United States Pharmacopeia.

Example:

index term — *abstract or reference #*

OF ASPERGILLIN-O TYPE ON CAPILLARIES CARDIO-VASC-DRUG 73-07521

modifying phrase — *specific drug affiliation*

The index is in sequence by IBM-370 collating convention. The computer alphabet follows the sequence A to Z. The numbering sequence 0 to 9 follows at the end of the alphabet. In a combination such as 2 4-D, the entry is indexed following the last entry under Z.

For an explanation and complete listing of all abbreviations used in the subject index, see the "Abbreviations for 1973 ABSTRACTS OF MYCOLOGY" located in the front section of each issue.
